

Curriculum Vitae

Profile

Senior product designer with 10+ years turning complex B2B workflows into clear, fast web and mobile experiences. Strong in UX, UI, research, and systems, designing end-to-end flows, micro-interactions, and scalable design systems in close partnership with engineering.

Skills

- User Research, Usability Testing, Heuristic Evaluation, Stakeholder Management, Cross-Functional Collaboration
- UI Design, UX Design, Information Architecture, Interaction Design, Design Systems, Component Libraries, User Flows, Responsive Design, Accessibility
- Rapid Prototyping, Vibe Coding, AI Design, Automation, HTML, CSS

Tools

- Notion, Miro, Optimal Workshop, Linear
- Figma, Design Tokens, Storybook, Adobe
- React, Next.js, TypeScript, Tailwind, shadcn/ui, Vercel, Git, GitHub, Agentic AI, Claude, Cursor, OpenAI, n8n, Ollama, OpenRouter

Education

- Board Infinity — Certification — AI-Integrated Design
- Google Career — Certification — UX Design
- Seattle Central College — Certification — Web Design
- University of Illinois at Chicago — BFA — Graphic Design

Experience

Product Designer — Studio Kihto — April 2017 – Present

- Multiple client platforms faced high layout debt and slow shipping velocity due to unoptimized, manual design handoff processes.
- Lead end-to-end web/mobile discovery for Nutriluent and scale a global management infrastructure for SmartResponse.
- Built modular design system updates, deployed automated workflows, and engineered high-fidelity, interactive prototypes.
- The new pipeline accelerated engineering delivery speeds and slashed legacy layout debt across cross-functional teams.

Product Designer — National Restaurant Association — June 2024 – May 2025

- ServSafe's legacy training platform suffered from high drop-off rates due to fragmented content and disjointed workflows.
- Strategically overhauled the end-to-end training journey, interfaces, and compliance tracking workflows.
- Ran behavioral analysis, mapped a unified user journey, and built a modular design system to simplify dense compliance content.
- The redesign successfully improved completion rates by 18% and reduced overall user friction by 25% across mobile and web platforms.

Product Designer — Microsoft Admin Center — June 2023 – February 2024

- Microsoft's enterprise cart workflows across web and mobile surfaces suffered from high friction, leading to severe administrative user errors.
- Improved the end-to-end cart experience through user research, complex wireframing, and interactive prototyping.
- Conducted usability audits, stakeholder interviews, mapped data hierarchies, and engineered high-fidelity interaction design patterns.
- The redesign successfully slashed cart errors by 20% and boosted administrative workflow efficiency by 15% across provisioning paths.

Product Designer — GloriFi — November 2021 – February 2023

- GloriFi needed to build a unified cross-platform financial wellness MVP within an intensive eight-month deadline to secure funding.
- Built the end-to-end UX, core design system, snapshot dashboard, and financial account flows.
- Led user research, mapped complex cross-platform information architecture, and built a scalable UI component library.
- The system scaled the launch to 40k+ active downloads, securing an 11th-place market ranking among financial apps.

Product Designer — Remitly — January 2020 – April 2021

- Remitly's global cross-border money-transfer journeys required optimization to fix fragmented mobile and web layouts.
- Strengthened core user interaction models and enforce strict enterprise accessibility standards.
- Ran iterative user testing, validated responsive design changes, and engineered accessible interface components.
- The design updates increased end-to-end transaction conversion by 12% and reduced common user errors by 18%.

Product Designer — Microsoft Hits — April 2019 – December 2019

- Microsoft's internal research repository suffered from high ingestion friction due to a complex, fragmented information architecture.
- Restructured the enterprise repository layout and streamlined data workflow structures for internal teams.
- Designed complex wireframes, developed interactive prototypes, and built a unified, scalable design system from scratch.
- The new platform improved workflow efficiency by 25% and reduced research ingestion friction by 30% for internal stakeholders.
